

(a) positive $\rightarrow$ negative

(b) negative $\rightarrow$ positive

positive $\rightarrow$ negative = patch Buy-condition states into the Sell prompt. Ticker-bootstrap 95% CI (seed 0, 2000 samples). Dotted lines mark the position-transfer intervals (L14-L15; L21-L22). Layer ordering holds in both directions; instruction-context transfer is asymmetric at L16 (0.52 vs 0.76).
